

This Infra Red sensor switch offers a discreet surface mounted solution for automatic switching of 12/24Vdc lighting.

Connection via the Sycamore plug and play connector system allows LED Lighting to be controlled by opening the door or drawer. Suitable for kitchen units and wardrobes (single and double door options available), this switch is easily installed using two screws and is supplied with two metres of cable to allow the control unit to be located either behind or on top of the unit. Includes distribution block.
